## **TABLE OF CONTENTS**

- Explanation of Road Log Listings
- Lookup Table of Departmental Routes to Route IDs
- Road Log by Route ID
- Summary Report by System by County
- Summary Report by City
- Summary Report by Urban Area
- Summary Report by Reservation

## EXPLANATION OF ROAD LOG LISTINGS

DEPT ROUTE	DESCRIPTION	REF POINT	ACCUM MILE	LENGTH	SYS	FC	SIGNED ROUTE	SURF TYPE	SURF WIDTH	LANES	COUNTY	CITY	URBAN AREA	RESERVATION	FD	AD	MS
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18

1. **Departmental Route** – Departmental Route IDs carry meaning based on system designations where the alphanumeric prefix of the ID designates the system to which the route segment belongs.
2. **Description** – Identifies the attribute change occurring at the beginning of the route segment. These changes could be route attributes, junctions, or jurisdictional boundary changes.
3. **Reference Point** – Reference point assigned to the beginning of the route segment. This represents the distance, in miles, from the preceding reference marker. Accumulated mileage, rather than reference points, should be used to compare mileage between route segments due to the varying distance between consecutive reference markers.
4. **Accumulated Mileage** – Sum of accumulated section lengths from the beginning of a route.
5. **Length** – Length, in miles, of the route segment.
6. **System** – Identifies the highway system classification of the route segment. These include:
  - Interstate (NHS)
  - NI-NHS (Non-Interstate NHS)
  - Primary
  - Secondary
  - Urban
  - State Highway
  - Off System
7. **Functional Class** – The process by which roads are grouped into classes according to the character of service they provide as defined by the Federal Highway Administration. These include:

<u>Functional Class</u>	<u>Abbreviation</u>
Interstate	Int
Principal Arterial	PA
Minor Arterial	MiA
Major Collector	MaC
Minor Collector	MiC
Local Road	Loc
8. **Signed Route** – The sign denoting the route number of a highway that travelers see on road in the field.
9. **Surface Type** – Identifies the surface type of the route segment.
10. **Surface Width** – Driving surface width from seal and cover width, identified by construction plans or field inventory.
11. **Lanes** – The number of driving, passing, and climbing lanes on the section of road. Turning lanes and parking lanes are not included.
12. **County** – The County boundary the route segment is within.
13. **City** – The incorporated City boundary the route segment is within.
14. **Urban Area** – The MDT Urban Area boundary the route segment is within. An area of 5,000 or more residents at the time of the decennial Census.
15. **Reservation** – The Reservation boundary the route segment is within.
16. **Financial District** – As defined by State law, there are five geographic areas covering the state. They are coded as:
  - 1 – Missoula
  - 2 – Butte
  - 3 – Great Falls
  - 4 – Glendive
  - 5 – Billings
17. **Administrative District** – As defined by MDT, five geographic areas within the state to which preconstruction and construction activities are assigned. Administrative districts are coded in the same manner as financial districts (see above); however, their boundaries do not necessarily coincide.
18. **Maintenance Section** – Four-digit code representing the maintenance section that maintains the route segment. A Maintenance Section value indicates that the segment is state maintained.
