

PROJECT OVERVIEW: RESERVE DRIVE: HUTTON RANCH ROAD TO WHITEFISH STAGE ROAD

The Reserve Drive: Hutton Ranch Road to Whitefish Stage Road project will widen Reserve Drive from Hutton Ranch Road to Whitefish Stage Road from three to five lanes, adding a center turn lane, replacing the Stillwater River Bridge deck, and adding a shared-use path and sidewalk. Intersection improvements to Hutton Ranch Road and Whitefish Stage Road will also include dedicated turn lanes, signal upgrades, and concrete surfacing. The project also includes reconstructing half a mile of Whitefish Stage Road north of Reserve Drive to a three-lane configuration. Schellinger Construction and DJ&A Engineering are working as a design-build team, with construction set to begin mid-summer 2024.

Reserve Drive is one of the two main east-west connectors linking US Highway 93 (US 93) and US Highway 2 (US 2), making it a key part of the Kalispell road system.
